Nagyadat Coolmini

Gesztesy Tamás, Nemkin Viktória

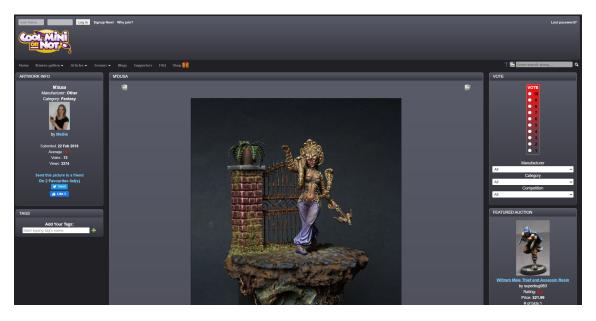

1. Bevezetés

Az elkészült programkódok és adathalmazok elérhetőek a https://www.github.com/nemkin/cool-mini-or-not webcímen.

2. Feladat

A félév során a Cool Mini Or Not weboldal (http://www.coolminiornot.com) adatelemzésével foglalkoztunk.

Az Cool Mini Or Not weboldal egy figurafestésekre specializálódott közösségi oldal, ahova a kifestett miniket lehet feltölteni, a többi felhasználó pedig szavazhat és kommentelhet a fotóinkra.

3. Adathalmaz letöltése

Az első feladat a weboldal adatainak a kinyerése volt. Ez általában egy nehézkes és körülményes feladat. Nagy méretű adathalmazról van szó, több 10 GB-nyi adat, melyet napokon keresztül tudunk csak letölteni. Általában a weboldalak üzemeltetői nem szeretik az ilyen jellegű letöltéseket, ezért előfordulhat, hogy blokkolják az IP címünket (például DDOS támadásnak hiszik a letöltést).

Szerencsére azonban a weboldal tartalma archiválva lett a Wayback Machine által (https://web.archive.org/web/2020*/coolminiornot.com), ehhez pedig már létezik letöltő script (https://github.com/hartator/wayback-machine-downloader).

A letöltő scriptet Raspberry Pi-n keresztül futtattam, mivel összesen 2 héten keresztül tartott a letöltés.

Sajnos problémát jelentett, hogy bizonyos régebbi bejegyzések rossz formátumban töltődtek le az oldalról, ezért egyéb letöltési lehetőségekkel is próbálkoztam (wget), azonban ezekben az esetekben a felhasználók kommentjeit nem lehetett letölteni, ezért végül az eredeti adathalmazt használtam fel, a hibás fájlok kiszűrésével.

4. Transzformáció

A következő feladat az adatok kinyerése volt a HTML fájlokból. Ehhez az LXML nevű Python modult használtam, melynek segítségével XML fájlokat lehet parsolni. A következő python program segítségével készítettem el az adathalmazt:

```
import sys
import os
import pandas as pd
import helper
import re
import traceback
from datetime import datetime as dt

from lxml import html
from lxml import etree

| | 399197 | 2013-06-24 18462 | Bohun | Thanks everyone for your commental Eurys, I don't understand, you say that the scaring would have been amazing if it was sculpted on the model, but not if it is painted?! Sorry, but I don't see any sense in that. They are not braids, but dreadlocks, the pattern has been sculpted, it's not a free |
| | 399342 | 2013-06-23 22716 | dennis. | 10 Worth every second, I just couldn't let a commission like that goll Change your phone number |

5. Online ajánlórendszer

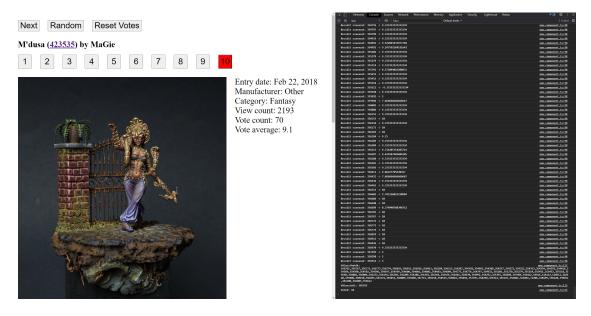

Az ajánlórendszer Item-based Collaborative Filtering alapon működik az ajánlórendszerek házihoz megosztott Recommender Systems, Sammut and Webb (2010) könyvből vett fejezet és az ott hivatkozott Linden et al. (2003) cikk alapján.

Ennek célja, hogy online, real-time képesek legyünk miniket ajánlani egy felhasználónak, miközben a miniket értékeli. A felhasználók összehasonlításán alapuló rendszerek esetében az aktív felhasználó

korrelációit minden szavazat után újra kellene számolni, ami online módon nagyon erőforrásigényes lenne. Ezzel szemben, az item-alapú ajánlórendszert használva előre ki tudtam számolni a minik közötti korrelációkat. Ezt egy nagy méretű json fájlban tároltam el, mely ezen a linken tekinthető meg.

Látható, hogy sok mininek 1.0, illetve -1.0 a korrelációja, ez abból adódik, hogy egyetlen felhasználó a kapcsolat közöttük, ez a felhasználó pedig ugyanazt a szavazatot adta mindkét minire.

Az ajánlórendszerhez készült egy egyszerű Angular-os weboldal, mely így néz ki:

6. ábra. Ajánlórendszer

A Next gombra kattintással lehet kérni a következő ajánlott minit, a Random gombra kattintással véletlen minit kérhetünk (ajánlórendszer nélkül), a Reset Votes gomb pedig törli az összes leadott szavazatunkat.

Amini neve melletti entry_id-ra kattintva az eredeti weboldalra navigálva megtekinthető az eredeti beküldés. A számolások részeredményeit a konzolban lehet nyomonkövetni.

6. Tanulságok

A félév során nagyon sokat tanultam a feladat elkészítése során.

A letöltés sokkal bonyolultabb lett mint amire számítottam: A letöltött weboldalak néha teljesen másképp néztek ki mint az élesek, például a kommentszekciót a wget teljesen kihagyta. A törött linkek nagyon sok problémát jelentettek, amiket nagyon körülményes volt kijavítani, van ahol nem is sikerült (valószínűleg elmozgatták azokat a képeket az éles website-on). Az adathalmaz méretéből fakadóan meg kellett oldani, hogy 2 héten keresztül zavartalanul fusson a letöltő, problémát okozott például egy kiment biztosíték, ami miatt előről kellett kezdeni a letöltést. Az adatok mérete szerencsére körülbelül 100 GB volt, de más adathalmaz esetében ebből is lehetett volna probléma. Emellett szerencsére nem tiltották le az IP címemet, még mindig elérem a weboldalt, pedig más weboldalak esetében ez is megtörténhetett volna.

Az adatelemzés közben próbáltam különféle összefüggéseket találni az adatokban, rajzoltam grafikonokat, szavak darabszámát elemeztem, ezen kódok egy része a https://github.com/nemkin/ cool-mini-or-not/blob/main/python/analysis.py linken megtalálható. A problémát az jelentette, hogy nem igazán találtam érdekes összefüggést, amelynek mentén el lehetett volna indulni. Nem találtam olyan attribútumot az adathalmazban ami jelentősen meghatározta volna a szavazatok alakulását, ez várható is volt hiszen a festés minősége a fő döntő elem.

Ezért végül egy ajánlórendszer elkészítése mellett döntöttem a szavazatok és a képek alapján. Itt szerettem volna valamilyen interaktív megoldást adni, ezért választottam az Item-based Collaborative Filtering módszert, mert azzal előre kiszámolt korrelációk alapján lehetett ajánlatokat adni. A korrelációk kiszámolása több órát vett igénybe, ezt szavazatonként biztosan nem lehetett volna megvárni.

A weboldal használata közben észrevettem, hogy ha jó szavazatot adok egy mininek, akkor előfordul, hogy ahhoz hasonló méretű, kinézetű (más felhasználó által feltöltött) miniket kapok legközelebb, ezért összességében valamilyen összefüggést sikerült kihasználni a collaborative filtering módszerével.
